变色高吸湿干燥剂是由氯化钙和淀粉以及硅藻土混合而成的具有变色功能，以及高吸附性能等优点的一种干燥剂。其在38°C、90%相对湿度下，吸湿能力可以达到280%左右。而当变色高吸湿干燥剂的颜色由浅棕色变为深棕色时，则应更换干燥剂。由于变色高吸湿干燥剂在极端环境吸附过饱和的情况下，有可能会有液态水渗出，不宜直接与金属等物质接触。变色高吸湿干燥剂在一些需要高吸湿量的场合得到了广泛的应用，用量最多的场合就是集装箱远洋运输。

Color changing high absorption desiccant is a kind of desiccant which is made of calcium chloride, starch and diatomite. It has color changing function and high absorption performance. At 38 °C and 90% relative humidity, its hygroscopic capacity can reach about 280%. When the color of high absorption desiccant changes from light brown to dark brown, the desiccant should be replaced. The desiccant may have liquid water seepage under the extreme environmental adsorption supersaturation, so it is not suitable to directly contact with metal and other substances. Color changing high absorption desiccant has been widely used in some occasions where high moisture absorption is needed, and the most used occasion is container ocean transportation.
